**To translate that into
improved HR Service
Delivery**

What we do

Mission statement:

Make HR Service
Delivery faster, easier
and personalised
through intelligent A.I

What the market is saying

71% of companies see people analytics as high priority in their organisation.
47% of companies have HR software that is over 7 years old.

Deloitte report in Global Human Capital Trends - 2017

270 Queries Logged to HR on average per month in a company of 200 employees. HR spend between 50-70% of their time answering queries.

Empxtrack query volume assessment report - 2016

Global market for chatbots is estimated at over US\$1bn. It is forecast to be worth US\$1.86 billion by 2020 and is set to triple in size in a decade.

Accenture report: Chatbots in Customer Service - Nov 2016

The Problems With Employee Service Today

01

Service quality and speed

Employees are frustrated with service speed, quality and accessibility

03

Repetition, Repetition, Repetition

HR Service departments are bogged down by repetitive and frequently asked employee queries

02

Lack of communication insight

Management teams desire more information to understand what employees are really concerned about

You Know This With Your Customers

“

Customers have experienced a mind shift:
They expect any desired information or
service to be available...on any
appropriate device...in context...at their
precise moment of need.

”

Forrester Research

We Know This

Sharon
Account Manager

Sharon travels a lot to meet clients all across the globe. She needs to regularly check the overseas expenses policy for each territory.

The time difference in Sydney means Sharon must log a service ticket or email People Services and wait until the morning. Sharon would really like a 24/7 service accessible by mobile with an instant response.

With Your Staff

Nico
People Services Team

Nico spends a large proportion of his day answering similar employee queries about leave, benefits and payroll.

He does it with a smile but longs to use his knowledge of employee concerns to assist the talent management team retain skilled individuals.

Give employees what they want

What if you could instantly answer 90% of queries via self-service on any device using Artificial Intelligence.

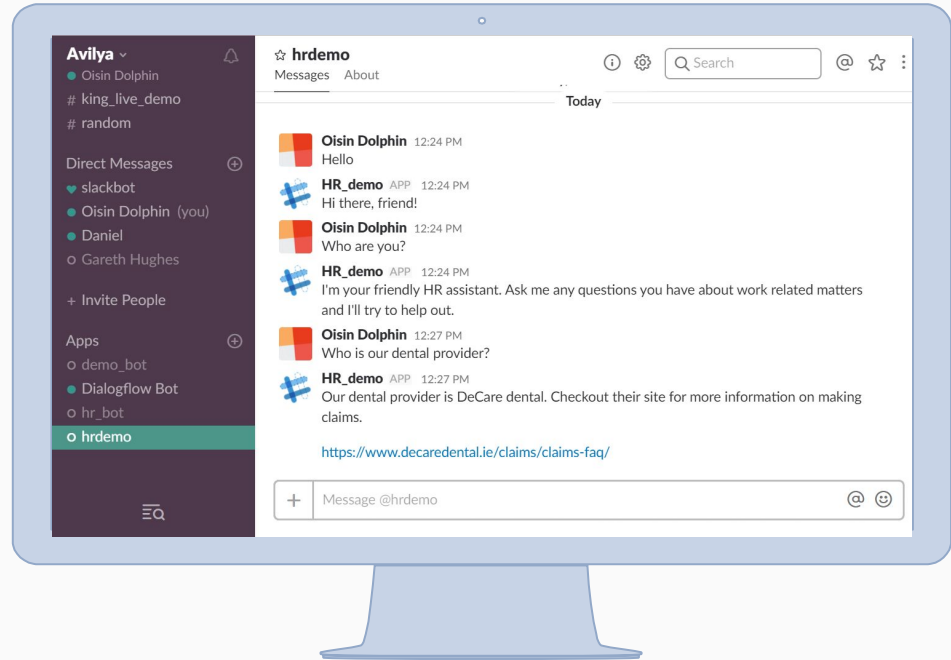

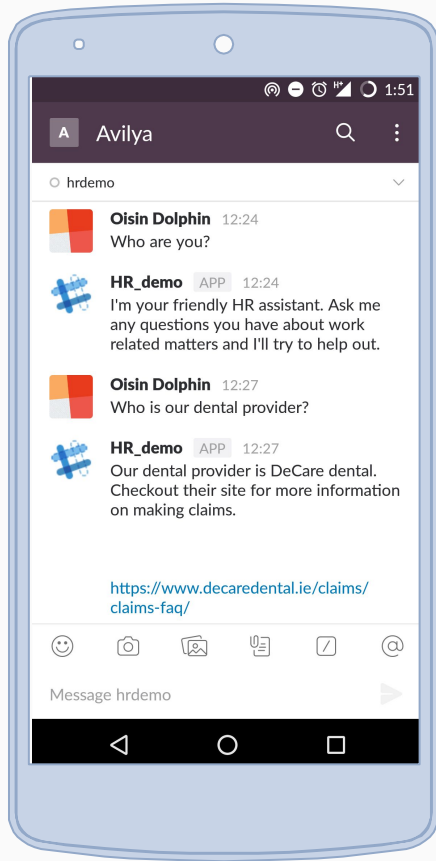

Save your HR staff from tedious work. Provide a consumer grade service for employees.

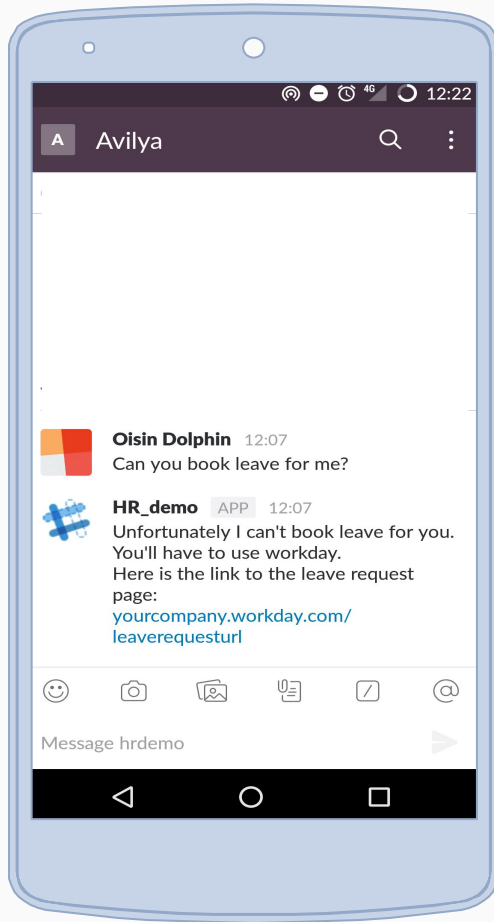

Our Solution

How it works - Our AI Virtual Assistant

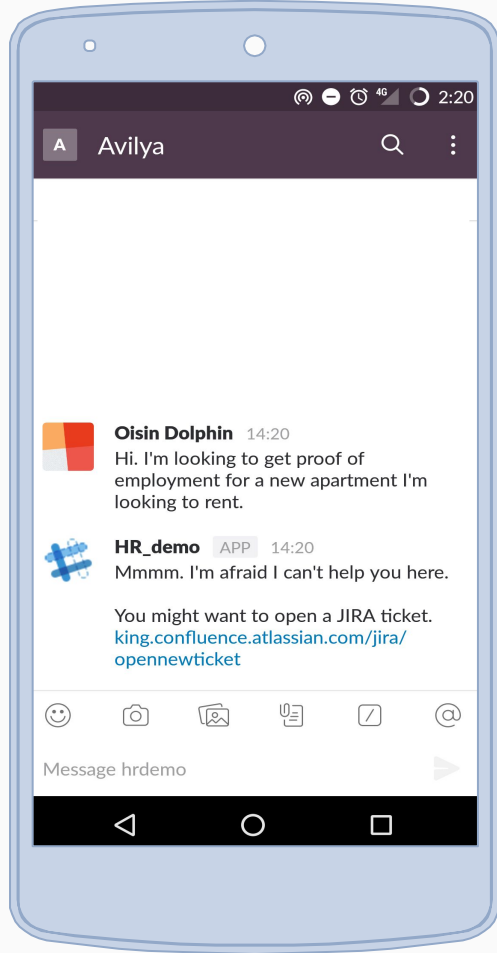

Users interact with the Assistant as if messaging a work colleague by direct message on company chat platform.

Deep links

The Assistant can also save users time by providing deep links to process forms they are looking for.

Query Failure

When the Assistant does not understand the query in initial versions it will prompt the user to open a service ticket.

Our Assistant knows how to fit in with your existing chat platforms and speak to current HRM Systems

Game Changers

Portability

Ready for use on any device, anywhere in the world.

Security

Your data is secure. All data is stored in the EU, no third parties.

Easy Integration

No need to switch to a new platform. We'll link in with your current setup.

Control

Change in policy? We leave the knowledge bank open for you to keep our Virtual Assistant up to date with organisational changes.

Available 24/7

Our AI Assistant never misses a day. Ask a query at any time, as many times as you like.

Query Escalation

No need to worry if your query falls outside the AI's knowledge range. We'll call in your experts for help and make sure we get it right next time.

And More

Recording Data Insights

Customisable Reporting

Report on frequently asked questions. Identify communication pain points in your organisation

Keep tabs on Service Levels

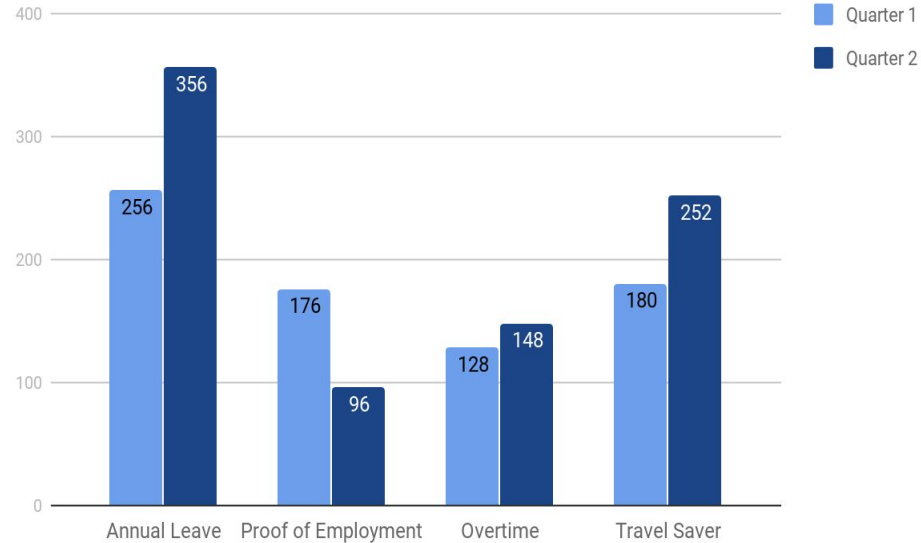

Track how many queries the bot successfully answers. Identify the content of escalated queries

And we're live!

Live data visualisations presented to management in a web browser. Or, pass the raw data straight to the People Analytics Team

Query Breakdown

Version 1.0

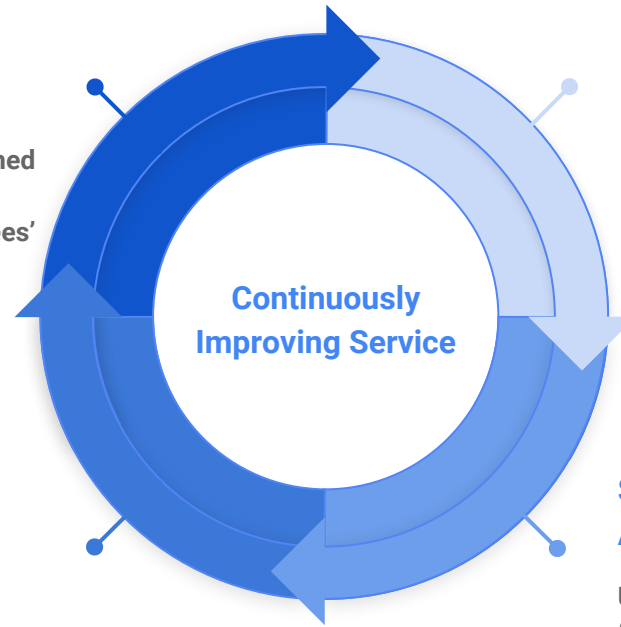

Continuously Improving Service Delivery

Step 4: Improving the Service

The improved Assistant is pushed live, equipped with a better understanding of your employees' queries.

Step 3: Improving the AI

These queries are corrected with an appropriate response that is installed in the AI knowledge repository for the Assistant to learn from.

Step 1: User Interaction

User interacts with the Assistant. The Assistant attempts to answer the question with a suitable response from its knowledge repository.

Step 2: Unsuccessful Queries Analysed

Unsuccessful queries are investigated for content, context and accuracy of the AI engine's response.

Potential Feature Release Whiteboard

Version 1.0

Document Management

Feature Description

Employees will be able to upload and search for documents with Avilya. For example request a payslip, proof of employment letter, upload expense receipts and much more.

Customer Value

Workforce Management

Feature Description

Users will be able to ask Avilya to search the workforce to see who is currently available or booked on projects. The employee search can be conducted using grade, skills and name.

Customer Value

Company Wide Announcements

Feature Description

Avilya will allow management to make company wide announcements about social events, new policies or procedures, surveys and more. Avilya can even deliver custom messages to specific teams.

Customer Value

Performance Management

Feature Description

Users can ask Avilya to request performance feedback and appraisal from coach to coachee. It can even suggest times to meet and submit a booking for approval.

Customer Value

Change Management Assistance

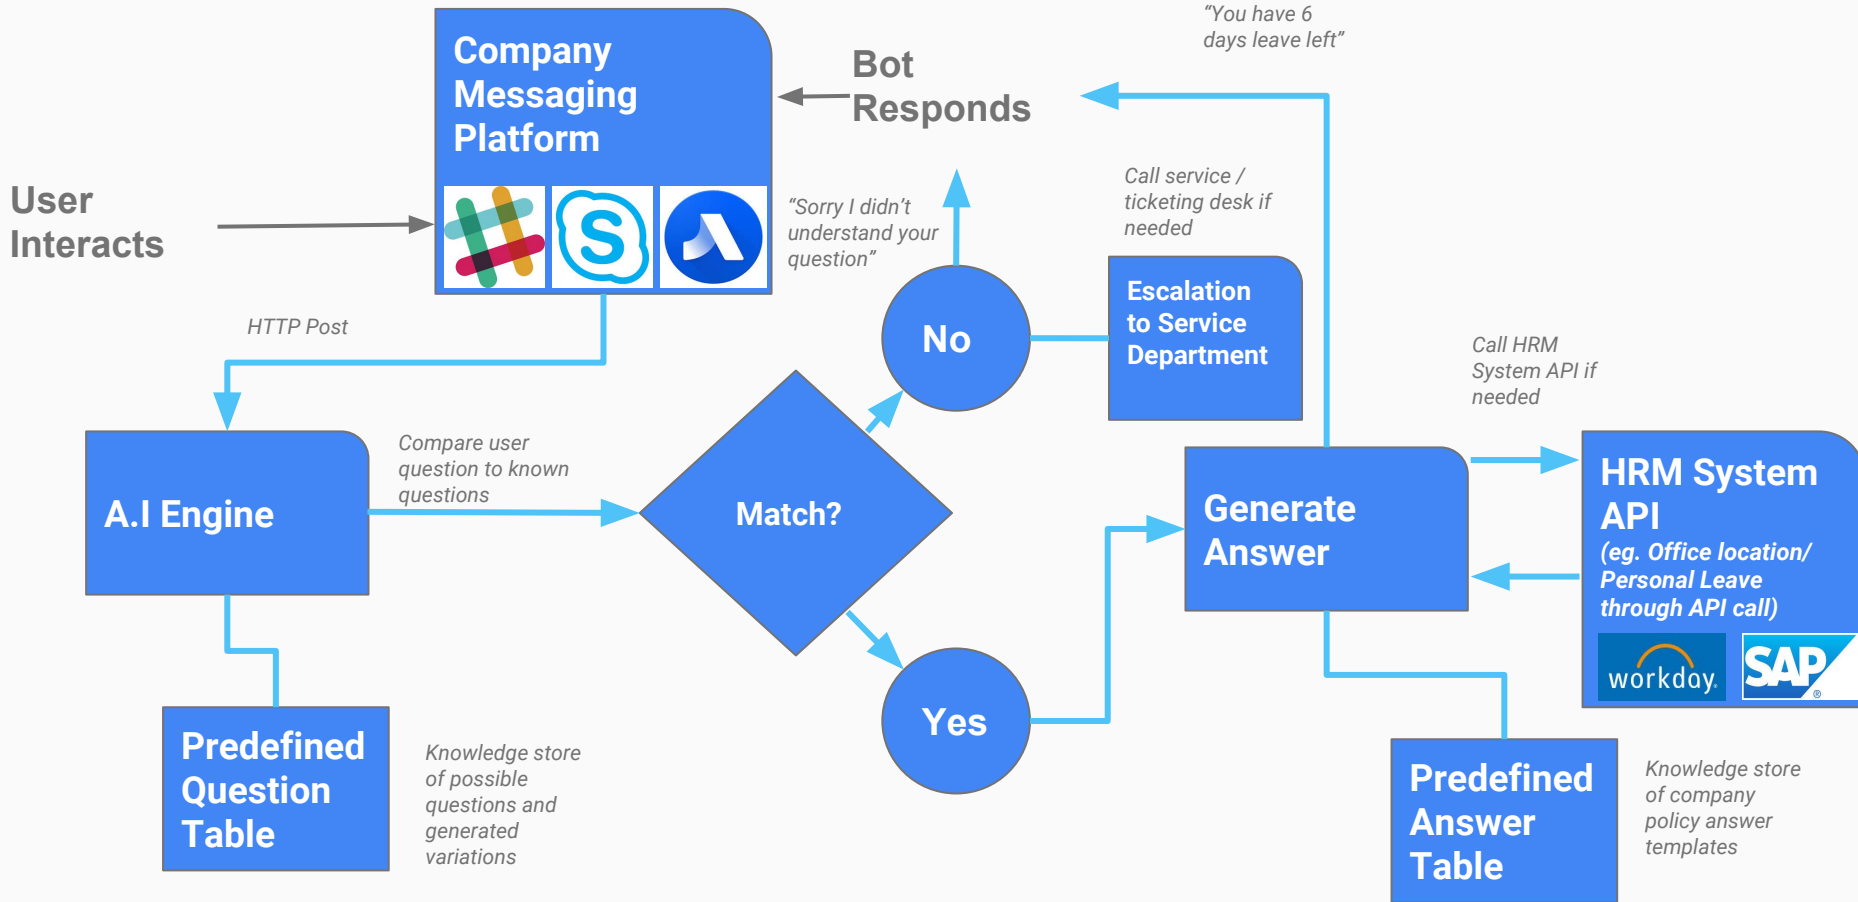

Feature Description

Avilya can analyse query content and make automated text reports for management to review at specified intervals. These reports will focus on high hit rate topics and offer suggested improvements.

Customer Value

Under The Hood

Explaining The A.I Engine

Version 1.0

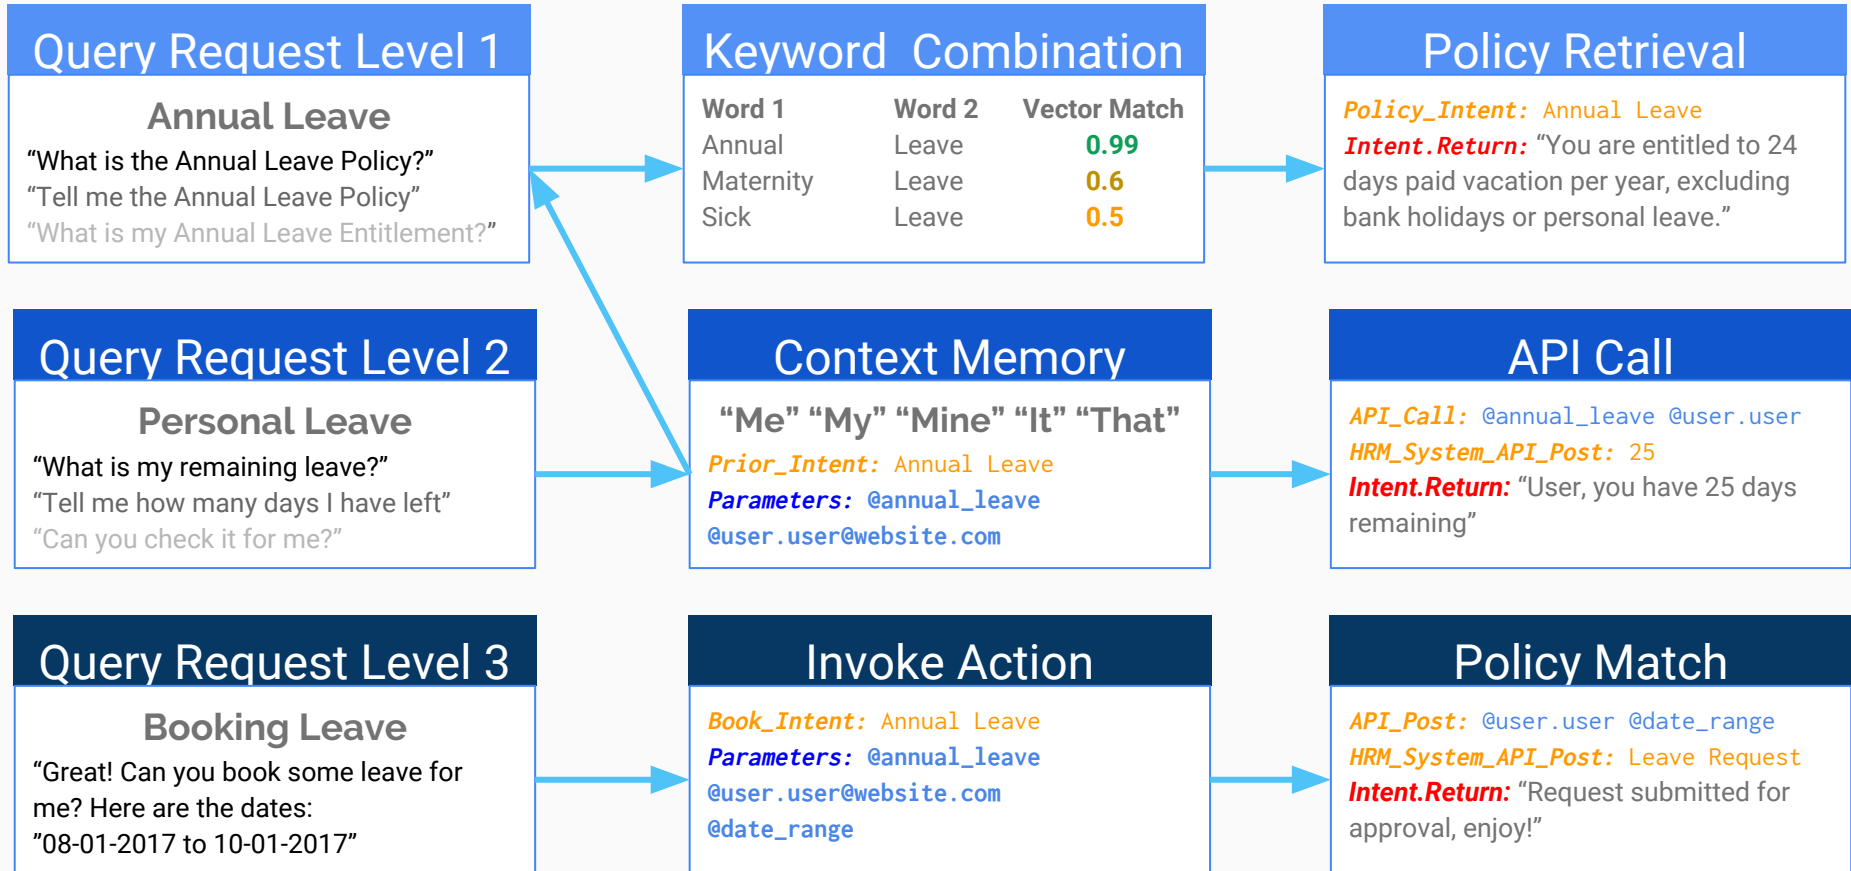

First imagine the A.I draws a map containing all words in english and plots them in space. Similar words are close together and dissimilar words are far apart (see diagram to left).

When the user inputs a question, words in that questions are matched against questions we have already created. If the words in the users question are reasonably “close” to the words in our predefined question, then the A.I understands that the 2 questions must be the same or at least very similar.

Interacting with Avilya

Version 1.0

Settling In

How will it fit in your HR Architecture

One Stop Service Shop

Connect with Avilya through your desktop or mobile instant messaging platform

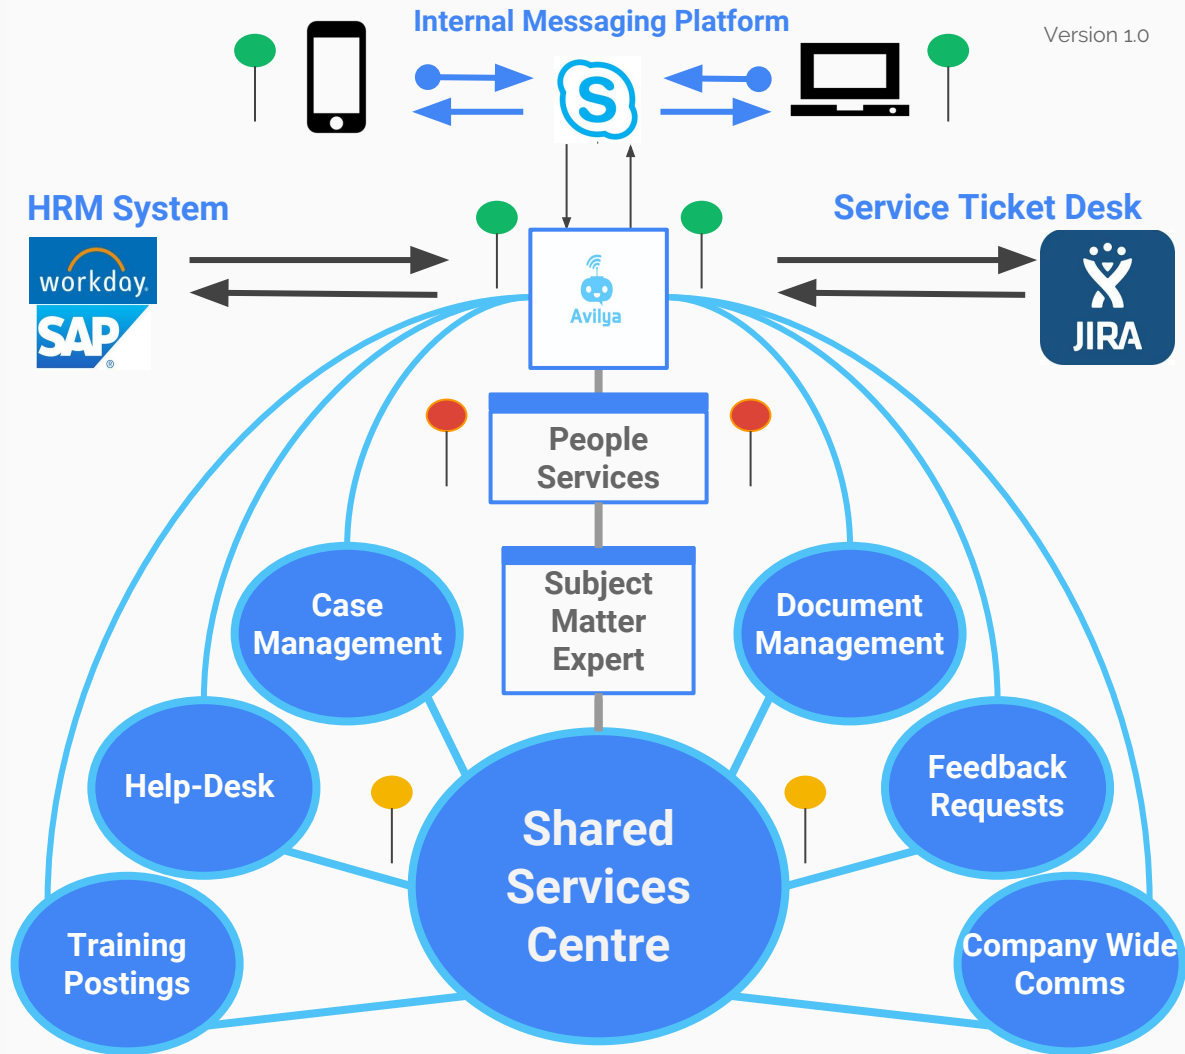

Call In The Experts

If your query falls outside our 90% knowledge range we'll escalate your query straight to the service desk

Get The Job Done

We can automate simple tasks like booking leave, or direct you straight to the source to do so

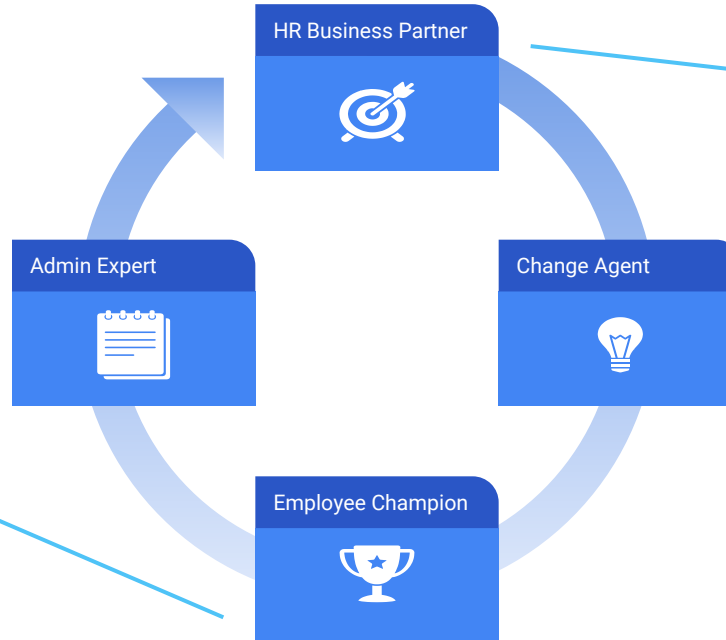

The Embodiment of Strategic HR

Compliance Mastery

Manage Avilya's service to ensure policies remain relevant, up to date and information is always available to your workforce

Positive Experience Catalyst

Gauge employee morale and satisfaction through surveys and polls. Use company wide announcements to create a culture of positivity

Business KPI Alignment

Use Avilya to report on service level standards and query resolution statistics aligned to business goals

Employee Assisted Change

Review areas of employee dissatisfaction expressed in query content and volumes. Create employee-centric change programmes
